

DEC-nn DOUBLE HEADED EXTENDER CABLE

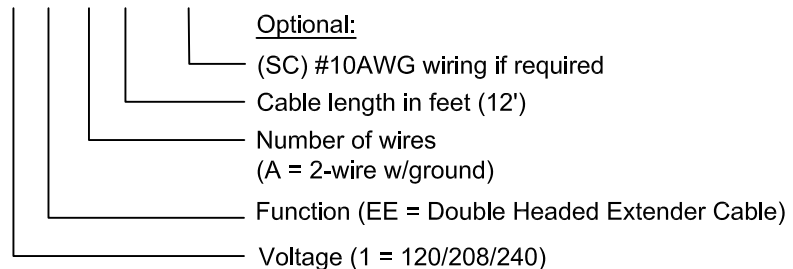

Description

The DEC-nn Double Headed Extender Cable is designed with one "power in" port and two "power out" ports making it possible to split the branch circuits power into two different directions. Each Double Headed Extender Cable is manufactured from Type MC Cable and consists of 90° C insulated type THHN #12 AWG, solid copper conductors and a #12 AWG, solid copper ground.

Note: #10 AWG is available upon request. All Double Headed Extender Cables are rated for the use on 20 ampere branch circuits, and are dead fronted for safety. To eliminate inter-voltage connection, each cable is keyed and color coded to meet specific voltage requirements.
